

 **ACQUIRED DATA SOLUTIONS**

For the past twenty years, ADS has been providing leading edge engineering test and evaluation solutions to government agencies and the private sector. Our expertise in data acquisition, testing and monitoring has made us invaluable to customers requiring solutions to improve their development environment, manufacturing process and product system quality. Our ability to emulate unique test environments allows our customers to solve complex problems in the developmental and operational phases prior to manufacturing, field testing, and deployment.

ACQUIRED DATA SOLUTIONS

ENGINEERING YOUR VISION IN THE CYBER AGE

SERVICES

- Engineering Services
- Spectrum Measurements
- Cyber Assurance (Cyber Assessments)
- Penetration Testing
- Machine Learning

PRODUCTS AND SOLUTIONS

- Acoustic/Vibration Sensors • Light Sensors
- Spectrum Fidelity ZX™ • Vision Systems
- Test Data Management • XY Plotter
- Cyber Resiliency Suite

SOFTWARE EXPERTISE

- C/C++ • Java/Java Script • LabVIEW
- LabWindows/CVI • Linux • .Net • .XML
- MS Access and SQL Server • Visual Studio

INDUSTRIES

- Aerospace & Defense • Medical
- Transportation • Infrastructure • Food & Beverages • Internet of Things (IOT)

Introducing the Cyber Resiliency Suite™

Solving your cyber resiliency challenges.

1. Start ADS CyberAssurance (manual) or CyberCertainty (automated) risk assessment. ADS engineers apply the NIST Framework to ensure a comprehensive review of your cyber risks.
2. Proceed (after completion of the risk assessment) to the ADS compliance testing phase using our CyberEvidence tool. Assessment results are fed into the CyberEvidence tool to test your cyber posture and to capture risk and compliance metrics.
3. Upgrade your cyber posture and improve your cyber resiliency by ADS CyberFix, whereby ADS develops and institutes countermeasures to address your document service offering.
4. Be confident that ADS will understand your target operational environments, associated cyber risks and resiliency requirements.
